ABUS

ALARMBOX 2.0

Simple anti-theft device for a variety of uses

The ABUS AlarmBox 2.0 is a versatile and compact security device designed to protect your belongings from theft. Battery operated it is equipped to detect vibrations and movement. Once activated, it emits a loud 100dB alarm for 15 seconds if it senses continued movement, which helps alert you to potential theft.

AlarmBox 2.0 can be mounted to a wide range of items like bags, push bikes, camping equipment, gas bottles, BBQ's or anything that you would like protect. Once armed the Alarmbox detects movement & gives an audible warning if movement persists it triggers a 100dB alarm for 15 seconds, alerting the owner of potential theft.

Now avaialble in 3 models, the AlarmBox 2.0, AlarmBox 2.0 with Cable & AlarmBox 2.0 with Chain.

Know when your valuables are moved!

2-in-1 alarm & locking system

When a thief is on the prowl, they want to attract as little attention as possible. That's exactly where this portable alarm system can deter theft and alert you to issues.

Features:

- Alarm function with min. 100 dB for 15 seconds, followed by reactivation.
- 3D Position Detection - alarm system that detects vibrations and the smallest movements in all three dimensions and triggers the alarm.
- Smart alarm – the AlarmBox 2.0 only emits a small warning beep in the event of minor and brief vibrations.
- CR2 battery included and connection option for ABUS adapter chains and cables.

2024 | 2nd Finalist

Jai Wallace

Prestige Lock Service | Port Kennedy, WA

Please provide a short personal biography about yourself:

At 24 years old, I am grateful to have found a career in locksmithing that perfectly aligns with my natural fascination for mechanical workings and problem-solving. After graduating high school, needing full-time work I was fortunate to secure an apprenticeship with Prestige Lock Service.

Over the past six years, I have been presented with opportunities including winning Rotary Apprentice of the Year in 2020, Achieving second runner-up in the 2022 MLA John Andrews Apprentice of the Year competition. In addition to furthering my experience through short-term roles at various companies, including BHP.

My passion for the trade is evident in my attention to detail and pride in my work. This dedication has enabled me to take on the role of Workshop Supervisor, where I have further developed skills beyond hands-on work.

What are some of the skills and abilities necessary for someone to succeed as a locksmith?

Like any trade, Locksmithing is nothing without the customers we serve. The ability to gain the trust of clients immediately through professionalism and expertise is something that has helped as a younger individual.

Strong interpersonal skills are integral to both understanding a customers needs, but also making sure they have full understanding of the service to ensure the upmost trust is maintained.

What key issues do you think will affect the locksmith industry in the next decade, and how should these be approached?

In the coming decade, the locksmith industry will face various challenges, including the advancement of technology. Locksmiths should focus on continuous professional development to stay ahead of new technologies and provide up-to-date service to end users. To make the most of training and opportunities, taking initiative to learn new products is essential.

Additionally, we have the ability to provide expert services where quality work and reputation will help differentiate trustworthy locksmiths in a market where unlicensed and unqualified 'scammers' are emerging. A focus on licensing will assist long term, but bringing awareness to the public through social media allows communities to become vigilant.

Tell us why you should be Australia's best young locksmith?

Becoming Australia's best young locksmith would be a significant milestone in my career, highlighting a combination of technical skills, dedication, and passion for the trade.

Over the past 6 years I have made apparent my constant hunger to learn and further my knowledge taking every opportunity presented to me and to teach others. This commitment was brought forward when I was invited back to my high school to speak about a career in locksmithing and the impact it has had on my life since graduation.

The title of ABYL is an awesome opportunity to assist in becoming a prominent individual within the industry that I aspire to be and contribute in the development of locksmithing locally and Australia-wide.

CARLAB
OCTOBER UPDATE

NEW

NEW Support for TIS Bypass & All Keys Lost For Toyota "BA" Systems

Roughly ~2020 - 2022 onwards (model dependent) Toyota and Lexus models move to a newer security platform. This is often referred to as the "BA" system, due to this being the "password" value on the new Texas Instruments keys and similar value on the Hitag AES key version.

For all keys lost situations, the SMART Pro ADC2020 or ADC2015 Emulator (transponder dependant) can be used to create a temporary working key, so it can then be used to authorise the programming of a new key.

Due to the implementation of a security gateway on the "BA" platform, reading the immobiliser memory direct via OBD is not possible. Therefore when no working key is available, the ADC2021 harness must always be used to connect directly to the SMART key ECU. This has the added bonus if bypassing any TIS security requirements for both Spare and All Keys Lost Situations.

Requires ADC2015 Texas DST Key emulator
(For ID7A-BA All Keys Lost Applications)
SD755650AD

Requires ADC2020 Hitag Key emulator
(For ID49-1E All Keys Lost Applications)
SD756922AD

Requires the ADC2021 Bypass harness
(For TIS Bypassing and All Keys Lost Applications)
SD756924AD

Please see the relevant CarLab vehicle listings for complete details.

Salto Testimonial
St Joseph's School VIC

TRUSTED BRAND

salto
INSPIRED ACCESS

Background

St Joseph's Catholic Primary School, located in Werribee, Victoria Australia, first opened its doors in 2020. The school currently hosts 366 students, with numbers expected to grow to 500 within the next two years. As a new school, St Joseph's is proud to offer state-of-the-art facilities to its students and staff, working from a masterplan that aims through design to foster community, creativity and innovation.

Challenge

Schools face common access challenges, including managing entry of staff and contractors, as well as students, on top of ensuring security without impacting the ability to provide a welcoming learning environment. The team at St Joseph's identified early on that a traditional master key system was not going to deliver the flexibility and ease of management desired. They engaged their security supplier to provide electronic options, and subsequently implemented Salto Space.

Conclusion

The incident has shifted how St Joseph's think about security. Troy Rickard explains, "The incident has changed the way we think about our Salto electronic access system at St Joseph's. We've seen how it can play an active part – rather and simply an automated part – of keeping everyone safe. We are exploring ways we can expand and tailor the Salto system to further meet the needs of our school."

Shane Robertson, Salto Certified Partner from Sentry Locksmiths, has been engaged to expand the system. He adds "Rather than a passive and automated system, we are looking at how Salto can play an active and deliberate role in St Joseph's security and safety plan. This includes enabling specific users to initiate from a mobile device and manage the feature per area or per classroom, as well as installing more access points."

Solution

St Joseph's is running the Salto Space solution, which is a fully integrated, stand-alone smart-locking platform. It comprises of wireless and hardwired locks which are operated through an on-premises software management system. The initial Installation covered 37 doors and the main perimeter gate, with products including the XS4 One escutcheons, Design XS Wall Readers, and Mullion Readers.

Following a security incident, the school is now looking to expand and enhance their installation.

Lockdown keeps staff safe St Joseph's Principal, Troy Rickard, tells of a time where the Salto system effectively protected staff from violent intruders.

In July 2024, at 4:01pm, two violent intruders were identified on campus. Thanks to automatic door scheduling already having locked the entry points, the intruders could not access the offices. However, to ensure safety of his staff, Principal Troy Rickard initiated Salto's Lockdown feature from the school's central Duress button.

This immediately locked all access points on campus, both internally and externally. No staff could exit into a dangerous area, as much as the intruders could not enter a building - so there was nowhere from them to go but back out of the school. Meanwhile, staff were also out of harm's way and could not confront the intruders.

LEAD ACID BATTERIES RANGE

Access control and intrusion detection systems are critical components of modern security infrastructure, providing protection against unauthorised access and potential threats. These systems often rely on continuous power supply to maintain functionality, even during power outages.

Lead-acid batteries, particularly valve-regulated lead-acid (VRLA) types, are a dependable and cost-effective solution for providing backup power to access control and intrusion systems. Their ability to deliver consistent power, combined with safety features and low maintenance requirements, makes them well-suited for security applications.

LSC 's range of lead-acid batteries offer features and benefits like CSIRO ActivFire certified, Absorbent Glass Mat (AGM) technology for efficient gas recombination and low self-discharge. All lead-acid batteries come with a 12 or 24 month warranty (size dependant).

For pricing and availability, visit lsc.com.au or speak to your local LSC branch or representative.

EVENT WRAP UP

## SECURITY EXHIBITION + CONFERENCE

SECURITY 2024 | SYDNEY

LSC was proud to attend the Security Exhibition & Conference in late August, where we lent our support to our valued trade partners in an event that has been pivotal to the security industry for over three decades. As Australia's leading platform dedicated to safeguarding our communities, the Security Expo continues to be the premier destination for security professionals and end users to discover essential solutions for today's complex challenges.

This year's theme, "Securing the Future," resonated strongly as we engaged with industry leaders and experts who shared their insights through the renowned ASIAL Conference programs. The Security Exhibition & Conference, recognised as the largest and longest-standing event in Australia, brings together security professionals from around the globe.

In addition to the conferences, attendees enjoyed multiple networking opportunities, including the Networking Drinks and the prestigious annual Gala Dinner, where thousands of security professionals connected and shared their experiences. LSC is committed to supporting the ongoing evolution of the industry, ensuring that together, we can meet the security needs of tomorrow.

LGA TRADE DAY | NEWCASTLE

LSC recently took part in a one-day trade event in Newcastle, NSW, supporting the Locksmiths Guild of Australia (LGA). This event allowed us to connect with locksmith professionals and showcase our commitment to innovation and quality. We engaged with attendees, exchanged technical knowledge, and presented our latest solutions, supporting the LGA's mission to promote high standards in the locksmith community.

Locksmiths explored our Silca key machinery and top products from ABUS, BRAVA, Borg Locks, Advanced Diagnostics, and PROTECTOR Locks. They also learned about our TechEd training program, designed to keep professionals updated on technology and best practices. Our Product Management and Marketing Teams were available to answer questions, provide insights, and build lasting connections with the locksmithing community.
