

Security Bypass Cable suitable for Toyota* ADC2018 - Code D756295AD

July 2024

The ADC2018 adds to Advanced Diagnostics' extensive coverage of Toyota models, allowing programming of replacement proximity keys for popular models like the RAV4 and the C-HR equipped with AA or A9 systems even when the alarm is active.

What does the ADC2018 bypass cable do?

With an alarm active the immobilizer blocks communication to the OBD socket. The ADC2018 bypass cable connects directly to the immobilizer control unit (Certification Unit) to restore the OBD communication so that Smart Pro, working with Advanced Diagnostics' ADS2328 software, can duplicate replacement keys. If all keys are lost, the emulator cable ADC2015 is needed to substitute the function of a working key.

No further intervention on the vehicle is necessary.

What else is needed?

Smart Pro

ADS2328
Programming Software

ADC2015 Key emulator
