

Emulator Cable suitable for Ford* & Toyota* ADC2020 - Code D756922AD

September 2024

Enables programming of replacement keys for both Ford and Toyota models when no working key is available. With Ford, the cable is required to shut down an active alarm.

What does the ADC2020 emulator cable do?

The emulator works together with the Smart Pro and Advanced Diagnostics software to create a master key in situations where all keys are lost for a range of Ford models with an active alarm and for Toyota models with HiTag-AES transponders.

Key data is read from the vehicle using the Smart Pro software and then written to the emulator which is connected directly to the Smart Pro via a USB cable. The emulator then becomes the master key for the vehicle allowing additional keys to be programmed in a faster, smoother process.

Why do I need the ADC2020 for Ford?

- Faster procedure. Eliminates time wait after reading data
- Shuts down active alarm
- No need to cover ultrasonic sensors to silence alarm

Why do I need the ADC2020 for Toyota?

- Enables programming of models with HiTag-AES transponders when no working key is available

What else is needed?

Smart Pro

ADS2269 (Ford) or ADS2328 (Toyota)
Programming Software

HU101R15
(Ford)

HU101AP05
(Ford)
